Experiment: 5

Nmap Host Discovery in TryHackMe Platform.

Aim:

To use nmap to discover live hosts using ARP scan, ICMP scan and TCP/UDP Ping scan techniques in TryHackme cybersecurity training platform.

Procedure:

1. Connect to TryHackme and start the target room machine.
2. Launch AttackBox or connect via openvpn.
3. ARP scan: nmap -PR -sn <target IP - range> -vieu mac addresses and vendors.
4. ICMP Echo Scan: nmap -PE -sn <target - PS.
5. TCP SYN Ping on multiple ports: nmap -PS 22,80,443 -sn <target-IP>

6. TCP ACK Ping: nmap -PA80 -sn <target-IP>

7. UDP ping: nmap -PU53 -sn <target-IP>

8. Combined Scan with verbose: nmap -PE -PS22,80 -PU53 -sn <target-IP>.

Result: 9/15 8/10

Various nmap host discovery techniques were successfully executed in the TryHackMe environment. Hosts were identified using ARP, ICMP, TCP and were observed.
