Experiment - 9

Analyze Different types of servers using Webalizer Tool!

Aim:

To analyze web server log files and generate detailed statistical reports about server usage using the webalizer log analysis tool.

Theory:

Webalizer is a fast, free web server log file analysis Program It Produces detailed usage statistical HTML format, displaying charts and tables showing hits, files etc.

Procedure:

1. Install Apache 2: Sudo apt install apache
2. Install Webalizer: Sudo apt install webalizer
3. Generate traffic: use a browser to access Local host rep tools

Command / Code

```
# install required Packages
sudo apt-get install apache2 webalizer

# Generate sample traffic
for i in $(seq 1 50); do curl -s http://localhost > /dev/null; done

# view access log
cat /var/log/apache2/access.log | tail 20

# Run webalizer on access log
sudo webalizer /var/log/apache2/access.log -o /var/www/html/webalizer

# view output
ls /var/www/html/webalizer
```

4. viewing log files at /var/log/apache2/ access.log :- cat var/log/apache2/ access.log | head 20.

5 Run webalizer : sudo webalizer -c etc/webalizer/webalizer.conf.

6 or run manually : sudo webalizer/ var/www/html/webalizer.

7. navigate output directory : cd /var/www/ html/webalizer.

8. open index.html in browser : http:// localhost/webalizer.

9. Examine the monthly summary : total hits, Pages, visits, unique IPs.

10. view hourly/daily statistics charts

15/x 9/10

result:

webalizer was successfully installed and configured. web server logs were analyzed and detailed html reports were generated showing site visitors top pages, referrers and traffic location distribution.
