Experiment-10

Learning and Assignment of IP address manually to computer

Aim:

To understand the ip addressing scheme and manually assign static IP address to computers on a network.

Procedure:

1) In windows open network and sharing center -> change Adapter settings -> Right click -> set IP manually.

2) Enter IP Address: 192.168.1.10, subnet mask: 255.255.255.0 Default Gateway

3) Enter DNS Server: 8.8.8.8 (Google DNS) click ok.

4) In Linux: use command 'sudo ip route add 192.168.1.101/24 dev eth0

5) To set gateway in Linux: sudo ip add 192.168.1.101/24 dev eth0

6) for Persistent configuration in Linux edit /etc/network/interfaces or use multi.

7) Verify the configuration using ipconfig or 'ip' a.

8) Ping the default gateway to confirm network connectivity.

9) Ping another computer on the same subnet to verify communication.

Result:

Static IP address were successfully assigned to computer connected was verified using Ping commands between hosts on the same subnet.
