Experiment 13

Customize Switch with network modules using Cisco Packet tracer

Aim:

To add network modules to a Cisco switch and configure advanced feature including VLANs, Port securing.

Procedure:

1) Open Packet tracer and add a catalyst.

2) Click switch -> tab -> off -> drag

3) Power on the switch and verify new interface.

4) Create VLANs switch (config) # vlan 10 | name sales.

5) Assign Port to vlans: interface fa 0/s,

6) Config trunk Port interface fa0/

7) enable Port security on fa0/1,

8) set violation mode switch

Commands/code

```
switch > enable
switch # configure terminal
Switch config( # vlan 10
Switch (config -vlan ) # names sales
Switch (config -vlan ) # vlan 20
Switch (config - vlan ) # exit
switch (config ) # interface fast ethernet 0
switch ( config -if) # switch port
mode access
switch (config -if) # switch port security
violt.
Switch (config) # interface fast ethernet
switch # show vlan brief
switch # show port-security interface
for 0/1.
```

9) Test by connecting devices to control VLans and verifying isolation.

Result:

network modulas were successfully added to the switch. Vlan were created and assigned to ports. Trunk Links and port security were configured and verified.
